#### APRIL/MAY 2024

# 23PEPH24C — ADVANCED OPTICS

Time: Three hours

Maximum: 75 marks

### SECTION A — $(10 \times 2 = 20 \text{ marks})$

## Answer ALL questions.

- 1. What is Interference?
- 2. Define Polarizer.
- 3. What is stimulated emission?
- 4. Write short note on population inversion.
- 5. How the pulse dispersion occurs?
- 6. Classify the types of modes in fiber optic communication system
- 7. What is harmonic generator?
- 8. List the types of harmonic generators.
- 9. How the inverse Zeeman effect occurs?
- 10. What is stark effect?

## SECTION B — $(5 \times 5 = 25 \text{ marks})$

### Answer ALL questions.

Demonstrate the polarization of light by 11. (a) double refraction method.

Or

- Explain the analysis of polarized light.
- 12. Classify the various components of laser and (a) give its functions.

Or

- Illustrate the working of Nd-YAG laser with neat diagram.
- Explain the ray dispersion in multimode step 13. index fiber.

Or

- Show the relation between acceptance angle (b) and the numerical aperture value of fiber optic.
- Give the outline of the optical mixing in a (a) 14. nonlinear crystal.

Or

Discuss the parametric generation of light in a crystal.

15. Summarize the Electra-optical effects.

Or

Explain the important features of magneto optical effects.

SECTION C —  $(3 \times 10 = 30 \text{ marks})$ 

Answer any THREE questions.

- Explain the interference of the polarized light through quarter wave plate and half wave plate.
- Illustrate the energy level diagram and explain 17. the function of semiconductor laser.
- Analyze the various types of modes in fiber optic 18. communication.
- Elaborate the concept of phase matching. 19.
- Criticize the Electric double refraction method 20. through various effect.
